DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 08188527.

The JP '527 reference teaches a cosmetic sheet comprising an aqueous gel sheet which known in the art for conditioning and beautifying the skin. The JP '527 document teaches 3 to 25% of a water-soluble polymer, gelatin and an additional water soluble polymer, polyacrylate (see page 9, at [0006, lines 1-9]), an agar gel (see page 18, at [0014] as well as 0.01 to 20% of a moisture-keeping component which is a humectant (see page 11, at [0008, lines 8-46]).

The JP '527 reference does not teach the particular properties of having a gel strength nor an adhesion force.

However, with respect to the silent teaching of the particular properties, there are no unexpected results, since the prior art teaches a cosmetic sheet which has a suitable tackiness to the skin, has excellent in the aging stability of the preparation properties and has an excellent cooling effect due to a high water content (see page 44).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use the teachings of the JP '527 reference. One having ordinary skill in the art would have been motivated to prepare a cosmetic sheet of the JP '527 reference comprising an aqueous gel, water-soluble polymers and a humectant.

The expected result would be a cosmetic sheet which comprises an aqueous gel, an agar gel, as well as an additional water-soluble polymer and a humectant.
